

Landscape Design

- ◆ University of Wyoming
- ◆ Laramie County Extension
 - Catherine Wissner, Horticulturist.

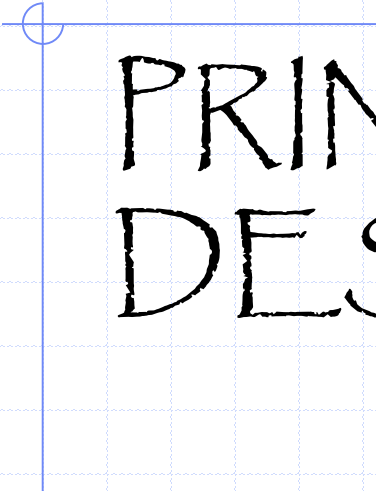

Landscape Design

- ◆ "Sustainable landscapes" describes landscapes that support environmental quality and conservation of natural resources.
- ◆ Once established, it should grow and mature virtually on its own – as if nature had planted it (less plant pruning, more use of native plants).

The Focus of a Good Landscape Design is To:

- ◆ Enhance or modify the existing microclimate.
- ◆ Increase plant and wildlife biodiversity.
- ◆ Reduce water use.
- ◆ Reduce maintenance.

PRINCIPLES OF DESIGN

Do a Site Analysis

- ◆ 1. Where is North?
- ◆ 2. Microclimates, good and bad spots.
- ◆ 3. Measure the site, this is a must do.
 - ◆ Put down the microclimates.
- ◆ 4. Seasonal sun angles.
- ◆ 5. What scale will you be using?
 - ◆ 1 inch equals 10 feet on paper.

Site Analysis

Water Wise Garden

- ◆ 1-Plan and design.
- ◆ 2-Create practical turf areas.
- ◆ 3-Improve the soil.
- ◆ 4-Use mulches.
- ◆ 5-Irrigate efficiently.
- ◆ 6-Maintain the landscape.

Get a Basic Idea
of What *You* Want

Develop a Theme(s)

- ◆ Butterfly, Native Bee or humming bird garden, a rose garden, an herb garden, a Victorian garden, formal or in-formal garden, a moon garden, a shade garden or a specific color garden.

- ◆ A garden for entertaining, having parties.

- ◆ Should have good winter appeal and texture.
 - Does it stand the test of black & white?

Develop a Theme

◆ Victorian Garden

Develop a Theme

- ◆ Wood Lands Garden for shady to filtered sun areas.

Wood Lands Garden for Shady or Filtered Shade Areas

- ◆ Hosta, Periwinkle, Hardy Ferns, Columbine, Meadow Rue, Bulbs, Daphne burkwoodii, Bleeding Heart, Mock Strawberry, Sweet Woodruff, Cranesbill, Japanese Blood Grass, St John's Wort, Silver Beacon Nettle, Edelweiss, Lupine, Mahonia, Jacob's Ladder,.....

Xeriscape

◆ Xeriscape does not

mean, **NO** grass or

ALL rocks.

It's not

Zero-scape

Design Principles

Rules

- ◆ Start to put your ideas on paper.
- ◆ Leave out types of plants, last thing you do.
- ◆ Go with heights and color first.

Different Functions

- ◆ Different areas around the property have different functions, like play areas, barbeque areas, private secluded areas.
- ◆ Storage area for tools.
- ◆ Areas for ponds, greenhouse areas.

Design Principles

SHERMAN'S LAGOON

by Jim Toomey

Order your Sherman's Lagoon collection today. Only \$10.95+p&h. Call (888) 866-6631. Sorry, no orders outside the U.S.

Working with Color

◆ Color theory

A Sample Color Wheel

Color Theory

◆ In the garden, color should:

- Be calming.
- Have a sequence.
- Repeat itself.

■ Is this picture restful to the eye?

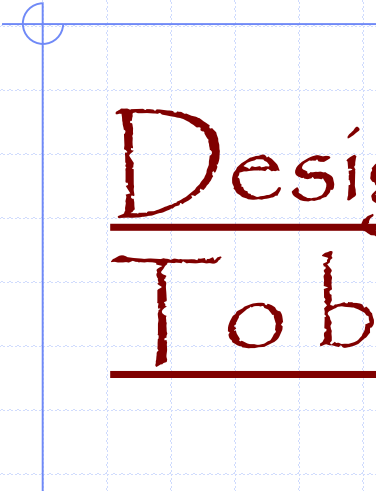

Color Theory

◆ There are no bad color combinations in nature.

◆ What colors do you like?

Design Principles To be Followed

Unity

- ◆ Is obtained by consistent style.
- ◆ Repetition of plants and building material with specific theme creates harmony.
- ◆ Unity means that all parts of the composition or landscape go together: they fit.
- ◆ A natural feeling evolves.
- ◆ Ex: brick walk way to a brick retaining wall or brick planter that are the same color.

Texture

- ◆ Describes the surface quality of an object that can be seen or felt.
- ◆ Surfaces in the landscape include buildings, walks, patios, groundcovers, and plants.
- ◆ The texture of plants differs as the relationships between the leaves, twigs and branches differ.
- ◆ Coarse, medium or fine could be used to describe texture, but so could smooth, rough, glossy, or dull.

Balance

- ◆ In design, refers to the equilibrium or equality of visual attraction.
- ◆ Symmetrical balance is achieved when one side of the design is a mirror image of the other side. There is a distinct dividing line between the two sides. Equal lines, forms, textures or colors are on each side of a symmetrical design.

Balance of Design

Balance

There is a distinct dividing line between the two sides. Equal lines, forms, textures, or colors are on each side of a symmetrical design.

Not Balance

Transition

◆ Is gradual change.

◆ Transition can be obtained by the arrangement of objects with varying textures, forms, or sizes in a logical sequential order.

◆ For example, coarse to medium to fine textures, round to oval to linear structural forms, or cylindrical to globular to prostrate plants.

Transition

Proportion or Scale

- ◆ One large towering oak may compliment an office building but would probably dwarf a single story residence.
- ◆ A three-foot pool would be lost in a large open lawn but would fit beautifully into a small private are..

Rhythm

- ◆ Is achieved when the elements of a design **create a feeling of motion** which leads the viewer's eye through or even beyond the designed area.
- ◆ Tools like color schemes, line and form can be repeated to attain rhythm in landscape design.
- ◆ Rhythm **reduces confusion** in the design.

Repetition

- ◆ Refers to the repeated use of features like plants with identical shape, line, form, texture, and/or color.
- ◆ Too much repetition creates monotony, but when used effectively, can lead to rhythm, focalization, or emphasis.

Repetition

- ◆ Unity can be achieved better by no other means than repetition.

Simplicity

- ◆ elimination of unnecessary detail.
- ◆ Too much variety or detail creates confusion of perception.
- ◆ Simplicity is the reduction of a design to its simplest, functional form, which avoids unnecessary cost and maintenance.

All These Principles Interact to Yield the Intended Design.

- ◆ Color, line, form, texture, and scale are tools which are used in combinations to adjust design principles.
- ◆ Design principles include unity, balance, transition, focalization, proportion, rhythm, repetition, and simplicity.

Next Step

◆ Schematic Design First.

- Get your general ideas down on paper.

◆ Different areas around the property have different functions.

- like play areas, barbeque areas, private secluded areas.
- Storage area for tools.
- Areas for pond, greenhouse, gazebo.

Landscape Design

Define Your Landscape Areas

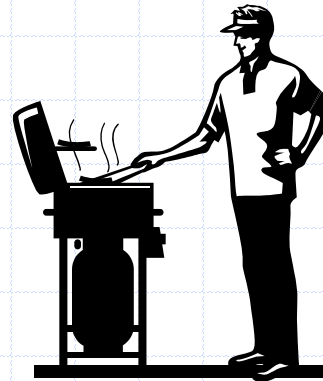

◆ Define a clear separation between:

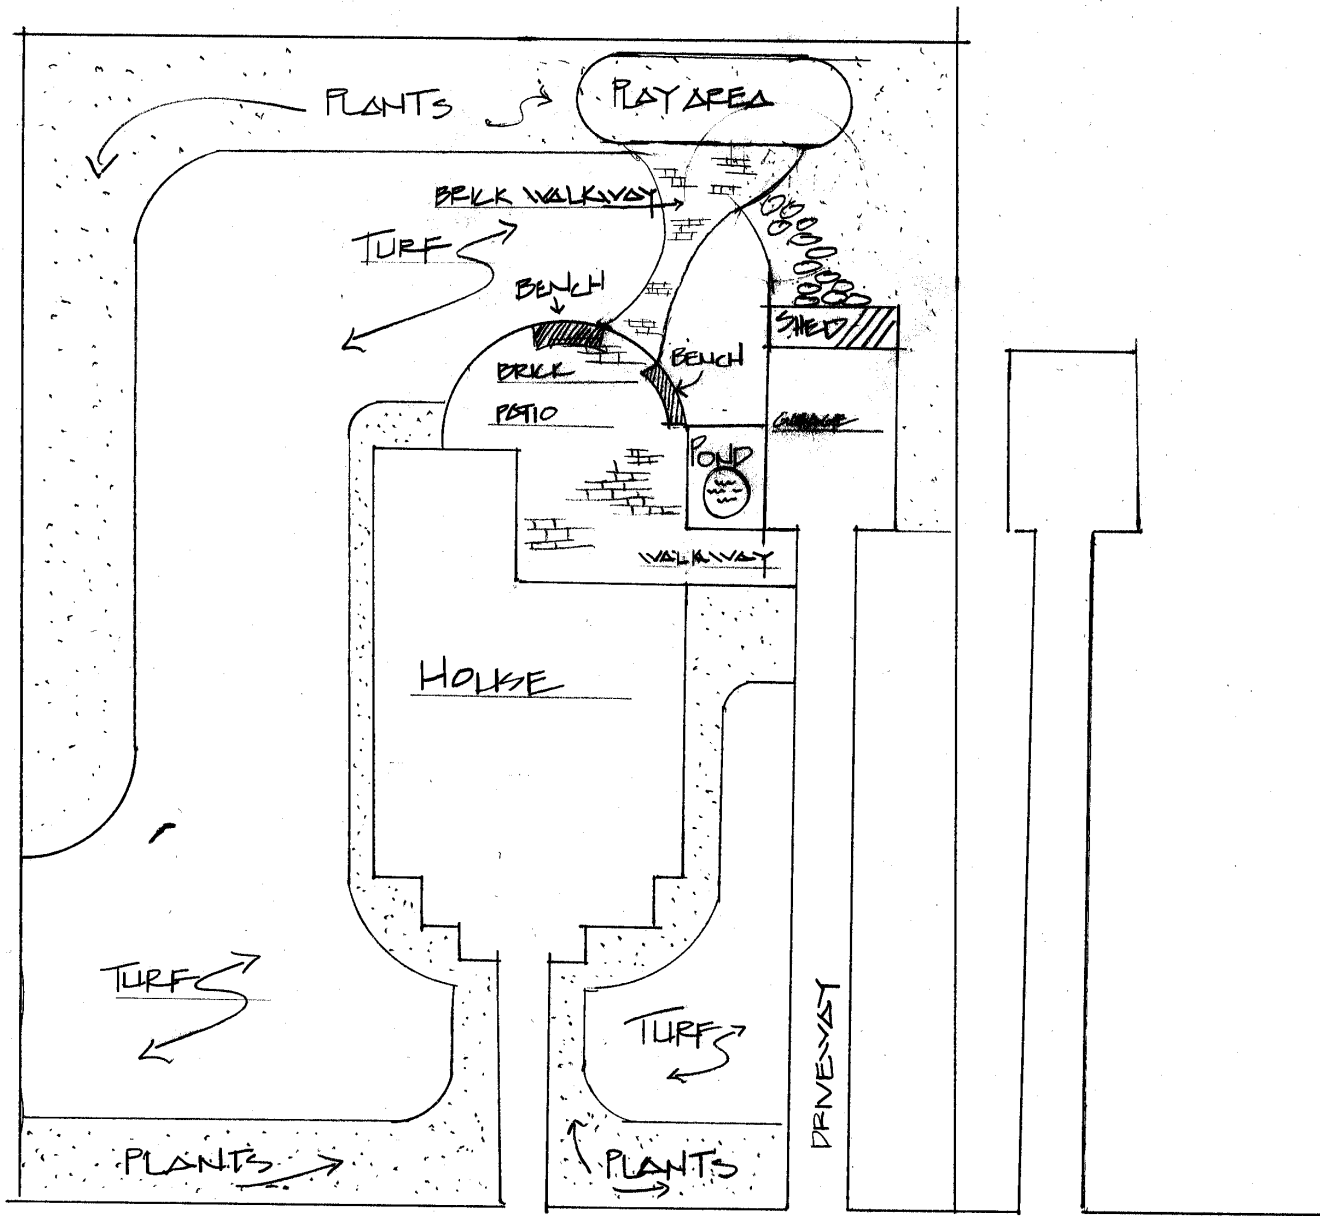

- Turf* *Do not do turf corner to corner.*
- Shrubs*
- Trees.
- Perennial beds (butterflies, native bees, birds).
- Play.
- Vegetable gardens.
- Hardscape areas*.
- **Why, for ease of mowing/maintenance.**

Next.....

◆ Draw in your Hardscape areas

- Patio.
- Walkways.
- Decks.
- Barbeque area.
- Retaining walls.
- Pond.
- Garden structures.
- Fences.

Next

- ◆ Draw in the areas for:
 - Shrubs.
 - Perennial gardens.
 - Vegetable garden.
 - Trees.
 - Specific plants are the last thing you do.

- ◆ Make notations on your plans on the heights for the above plants.

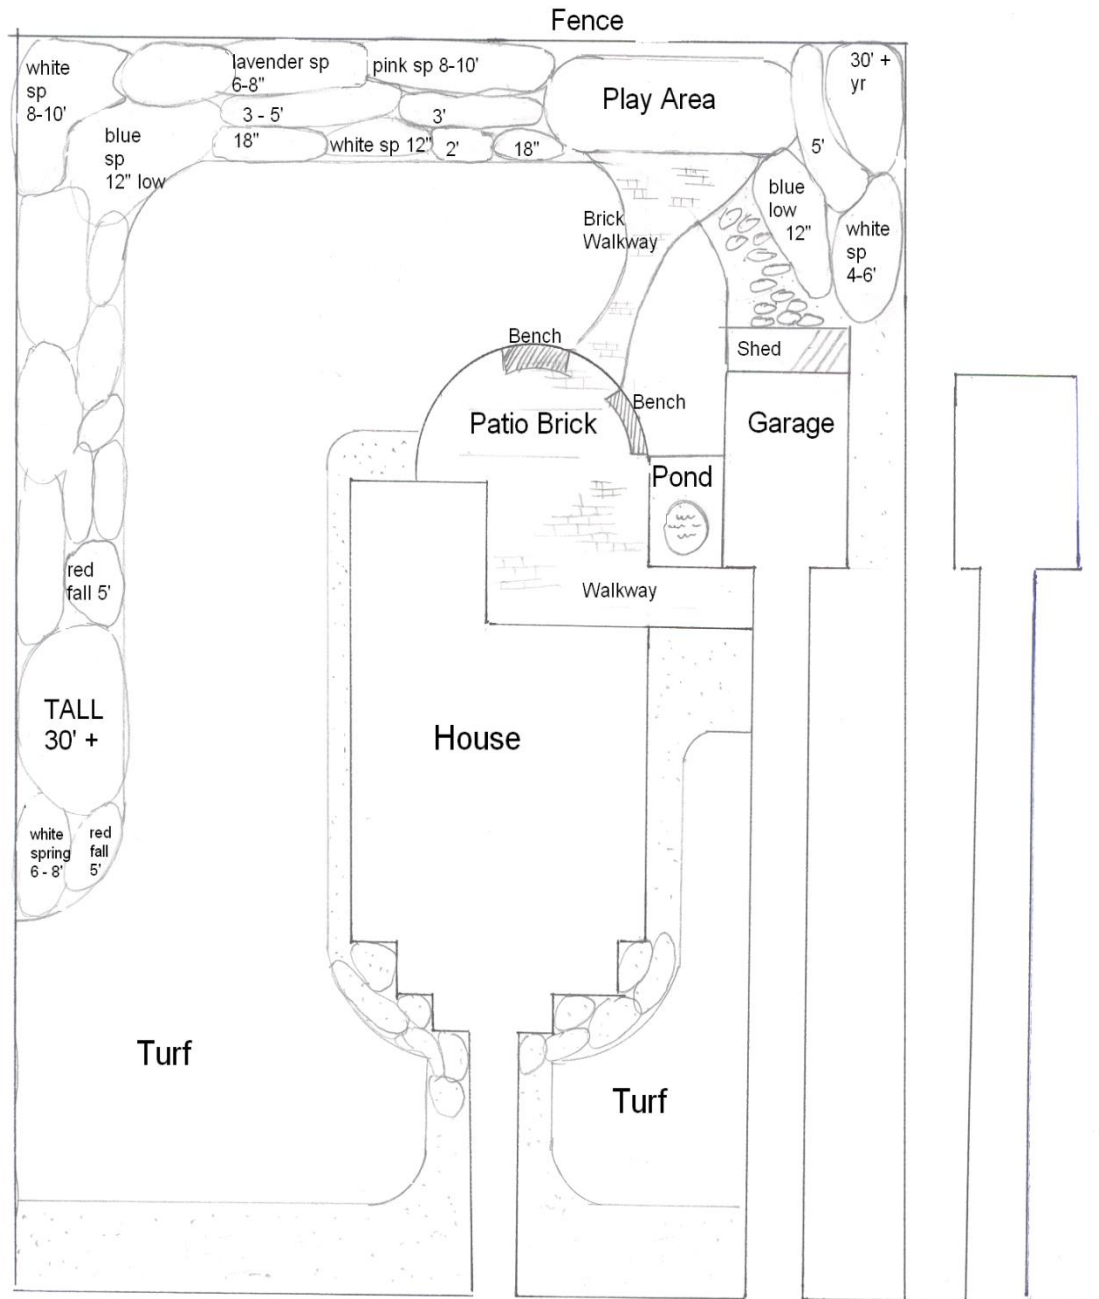

Color

◆ Time to add color

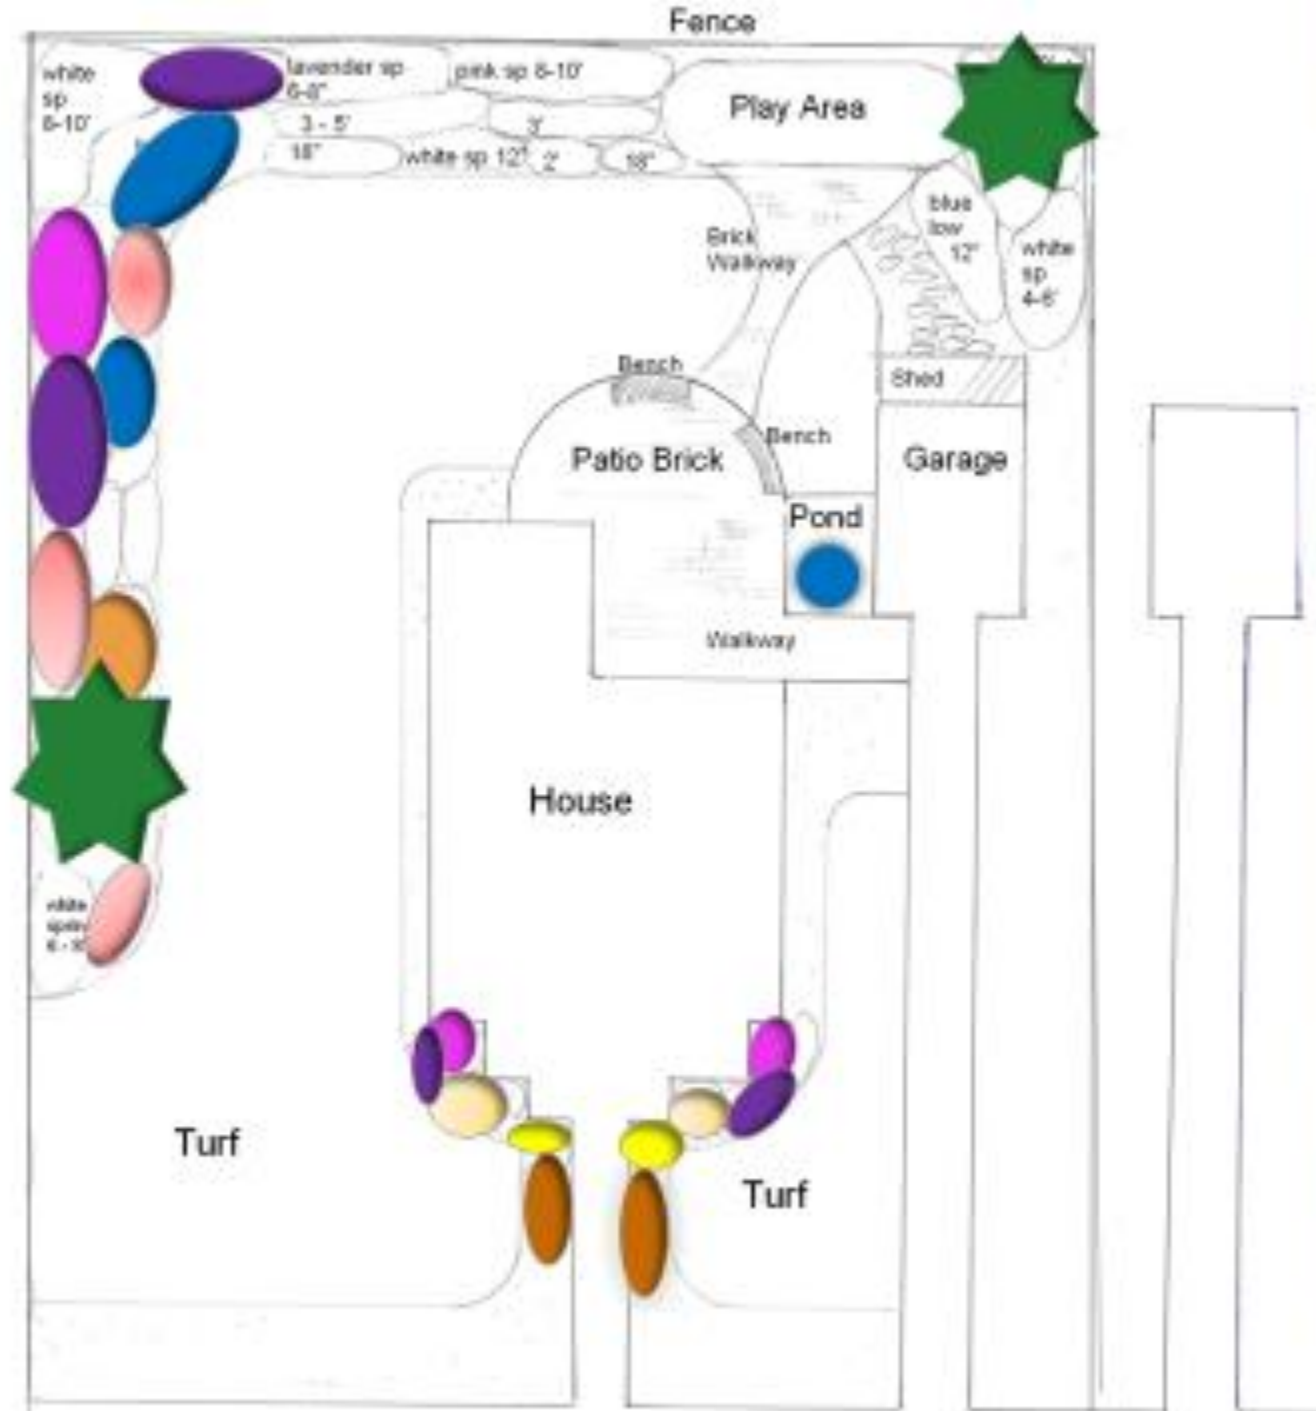

- Seasonal Color for shrubs, trees, perennials.
 - ◆ Winter texture, spring, summer and fall color.
- Write the colors in on your design.
